

Proficiency Test 2

Ashay Joshi

Task 1

```
for(x in mtcars$mpg[1:3]) {  
  print(x)  
}
```

```
[1] 21  
[1] 21  
[1] 22.8
```

Task 2

```
count_above <- function(numeric_vector, cutoff_value) { # creates the function with numeric  
  count <- 0 # sets the initial count to 0  
  
  for (i in 1:length(numeric_vector)) { # creates a for loop to iterate through the vector  
    if (numeric_vector[i] > cutoff_value) { # this is a selection statement to see whether t  
      count <- count + 1 # adds 1 to the count if the observation is greater than the cutoff v  
    }  
  }  
  return(count) # returns the count  
}
```

```
count_above(iris$Sepal.Length, 6)
```

```
[1] 61
```

```
count_above(mtcars$disp, 150)
```

```
[1] 20
```
